        ximage:flip="horizontal">
    <!--Horizontally flip image-->
  </image>
</svg>
```

**Fig. 9 (b)**

**[Designation of flip direction]**

**non: Do not flip**

**horizontal: Flip in horizontal direction (right-left flipping)**

**vertical: Flip in vertical direction (up-down flipping)**

**Fig. 9 (c)**

Fig. 10 (a)

```
<?xml version="1.0"?>
<svg>
  <image xlink:href="image.jpeg"
        width="100" height="100"
        ximage:fit="xMidYMid meet">
    <!-- Designate to maintain image aspect ratio -->
  </image>
</svg>
```

Fig. 10 (b)

[Designation of arrangement]

non: Image and display rectangle to be matched without maintaining aspect ratio  
xMinYMin: Left upper ends of image and display rectangle to be aligned while maintaining aspect ratio  
xMidYMin: Left-right center upper ends of image and display rectangle to be aligned while maintaining aspect ratio  
xMaxYMin: Right upper ends of image and display rectangle to be aligned while maintaining aspect ratio  
xMinYMid: Up-down center left ends of image and display rectangle to be aligned while maintaining aspect ratio  
xMidYMid: Centers of image and display rectangle to be aligned while maintaining aspect ratio  
xMaxYMid: Up-down center right ends of image and display rectangle to be aligned while maintaining aspect ratio  
xMinYMax: Left lower ends of image and display rectangle to be aligned while maintaining aspect ratio  
xMidYMax: Left-right center lower ends of image and display rectangle to be aligned while maintaining aspect ratio  
xMaxYMax: Right lower ends of image and display rectangle to be aligned while maintaining aspect ratio

[Designation of margin]

meet: Display the entire image (blank margin is created)  
slice: Display without any blank margin (A portion of image may not be displayed)
